## Current Release

---

### Version 1.2 – August 2021

---

#### Required Integriti Version

---

Integriti Pro/Infiniti v19.0 or higher

#### Tested Against

---

- Sine Server Software v0.167.4.730dd84cb

#### New Features

---

- **Set Visitor Area/Location on Provision or Deprovision:** Visitors that are provisioned and deprovisioned via the Integration can now have their Area/Location updated or cleared on Provision and/or Deprovision.
- **Mobile No. Custom Field Updated by Sine:** Visitors Provisioned via the Integration can now have their Mobile No. updated and managed by Sine via the information provided on Provisioning.

#### Fixed Issues

---

- The Integration will now set the 'DestinationName' property of its Provisioning response to 'null'. This complies with a change made to Sine that will ensure that custom text printed on badges is not overwritten by the Integration.

## Version 1.1 – September 2020

---

### Required Integriti Version

---

Integriti Pro/Infiniti v19.0 or higher

### Tested Against

---

- Sine Server Software v0.143.2.65c4f03f

### New Features

---

- **Cancel User On Deprovision:** Added the ability to set whether a User is cancelled once a visit is deprovisioned, preventing any access requests from that User.
- **Clear Permissions On Deprovision:** Added the ability to set whether a User's Permissions are cleared once a visit is deprovisioned
- **Visitor Properties On Deprovisioned:** Added the ability to specific properties to be set to a User once a visit is deprovisioned.
- **"Clear Value" Property Source:** Visitor Properties can now be set to empty or default when they are set.

### Feature Updates

---

- Users that were cancelled will be reverted on the Activation of a Visit.
- Users are now given the expiry dates of Visits instead of Credentials.

## Version 1.0 – June 2020

---

### Initial Features

---

The Sine Integration is designed to manage the access control side of the Visitor Management process by handling requests made from the Sine system, including generating Users for Visitors, assigning them Permissions based on their Host and creating credentials to be used readers and turnstiles throughout a designated site.

The Sine Integration also handles manual Deprovision requests by suspending the credential associated with the Visit, preventing the Visitor from accessing the site further, but preserving the associated User for future use as well as record keeping through Integrati's Audit feature.

#### Integration Features

- Provisioning:
  - On a request from Sine, assigns a User to represent the Visitor of a Visit, either creating a new one or finding a User with a matching email address.
  - Assigns permissions to this User based on the provided Host, matched against an existing User's email address.
  - Creates a credential based on a configured Card Template.
- Activating:
  - On this request, the Integration will activate the Credential given to the Visitor's User, allowing access to the permissions assigned to them in the Provisioning process.
- Deprovisioning:
  - On this request, the Integration will suspend or delete the credential from the Visitor's User, preventing them from further accessing the site or permissions assigned to them.
