INNERRANGE.COM

ABOUT US

Inner Range is a manufacturer and integrator of unified Video, Access Control and Security solutions. Founded in Melbourne, Australia, Inner Range has over 35 years of innovation and has more than 150,000 systems deployed globally.

We manufacture end-to-end solutions from the card you badge at one of our readers to the controller securing the door, right through to the enterprise security management software monitoring multiple sites anywhere in the world. Our scalable products are suitable for high-end residential, commercial and enterprise sites across verticals such as education, healthcare, government and critical infrastructure.

66

We are passionate about empowering our customers to protect what they value most, their property, their possessions and most importantly – their people.

99

Inner Range offers our partners a range of competency-based training courses to ensure the best experience with our products and outcomes for their customers. Additionally, our global support team ensures that any issues are resolved quickly with minimal impact to the end user.

From entry to enterprise, Inner Range provides an end-to-end security solution capable of addressing the most difficult building management needs, providing peace of mind for you and your people.

Our continual investment in research and development puts our products at the forefront of access control, security, video and smart building technology. We partner with best-in-class providers of adjacent technologies such as intercom, payroll, building automation and incorporate the latest in AI technology with solutions for facial recognition, biometrics, number plate recognition and many more. With over 130 native integrations to 3rd party systems and open integration pathways, we provide our customers with a unified system behind a single pane of glass.

SECURING HEALTHCARE

Modern healthcare and hospital facilities are required to cater to a large number of patients and stake holders and operate in fast paced 24/7 environment.

Facing serious risks such unauthorised entry and assaults against staff, Healthcare facilities require a security system that can ensure the safety of its patients and staff as well as providing the public access required to effectively deliver its services.

CENTRALISED
MANAGEMENT

SAFETY OF PATIENTS AND STAFF – ACCESS CONTROL

Healthcare facilities are often high traffic, fast-paced environments, therefore requiring a complex security system that can ensure the safety of its patients and staff.

Integriti's Access Control features ensure that only authorised stakeholders are permitted in restricted areas. Additionally, staff can have access to restricted areas only during time periods where they have a valid reason to enter secured spaces.

SAFETY OF PATIENTS AND STAFF – DURESS ALARMS

Duress alarms can be raised from fixed or mobile duress buttons. These alarms may be a push button underneath the desk of a reception, patients room, call points, nursing stations or a wireless wearable duress alarm transmitter. Regardless of the location of the button, these systems trigger immediate notification of an event to first responders via Integriti's messaging application – Communicator which will broadcast text and emails.

SAFETY OF PATIENTS AND STAFF - CCTV INTEGRATIONS

CCTV integration can provide control rooms with immediate access to live and recorded video associated with the Duress Alarm displayed on a schematic map which shows the exact location of the incident.

CONTRACTOR MANAGEMENT

Large Healthcare facilities require the services of hundreds of independent contractors who require access to the premises. In addition to its native functionality integriti also seamless integrates with dedicated Contractor Management Systems.

These systems ensure contractors are provided temporary access credentials, and have complied with onsite Health and safety inductions. In addition, Contractor invoices can be reconciled with the actual time that contractors spend on site.

PROTECTION OF VALUABLE DRUGS AND EQUIPMENT

Access to valuable or dangerous assets such as Medical Equipment and Pharmecutical Drugs can be tightly controlled with full access reports available to record detailed information regarding the entry into these controlled areas.

MANAGING A COMPLEX ARRAY OF BUILDING & HEALTH SUBSYSTEMS

Large Hospitals and healthcare facilities consist of dozens of intelligent building systems that need to integrate and operate harmoniously in order for the facility to function in a safe and efficient manner.

Inner Range's Integriti platform supports full integration with a host of systems relevant to a healthcare environment such as Nurse Call systems, Management systems and Patient Management systems.
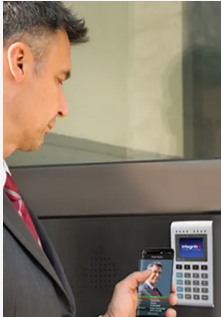

UNIFIED
SOLUTION

ANALYTICS INTEGRATION

Reducing the time to acquire and interpret information, data analytic technology advances the intelligence of not only the security system, but also the building applications. Those systems use their own communication protocols, and Inner Range acts as a data aggregator to normalize that data.

ACCESS CONTROL

Allowing the approved persons to be in the places that they need to complete their job is critical. But even more critical is preventing unapproved persons from accessing secure areas. This protects the people and assets of the organization and can also reduce other costs such as insurance.
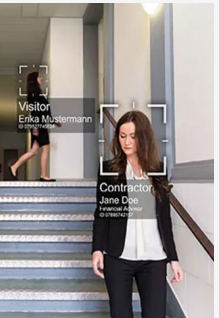

INTRUDER DETECTION

Notifying the correct authority of unwanted persons in an area or on a property in an appropriate timeframe helps prevent loss. Escalation of specific events to the correct responder allows them to make better decisions for resolving the issue.

DURESS ALARMS

Duress alarms are a critical component of Hospitals and Healthcare facilities to ensure the safety and wellbeing of both staff and patients on site. It is vital that in duress alarms are reported to a responding authority, facility management and other staff ensuring that appropriate responses are activated.
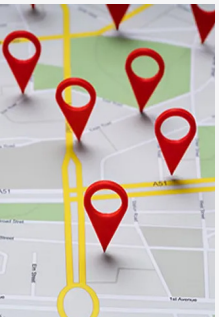

FACIAL RECOGNITION

This identification of a person by a camera, as well as the credentials that the person holds or knows, can assist in assuring that the correct people are in the proper area. Facial recognition analytics can act as the credential to allow a person to gain entry to a building or area.

VIDEO SURVEILLANCE

Utilising the Enterprise Integriti platform, system operators are able to visually verify alarm events in real-time, using video feeds from an interconnected Video Surveillance platform. Security Personnel are able to view, control and customize Video layouts all within one centrally managed system.

RTLS INTEGRATION

Real-Time Location Systems are commonly deployed in high-security situations, and allow Security Operators to maintain accurate status and location of Security Personnel in real-time. The RTLS integration with Integriti allows for location monitoring via the same graphical interface as every other aspect of the system.

MOBILE APPS

In critical situations it is expected that staff, patients, contractors and visitors be notified instantly. Mass notification of the events on site can save lives and assist responders with management of the situation. Notifications to be sent to specific groups of people based upon the type of event at the facility.

Healthcare Facilities are unique.

Security systems are vital in hospitals to safeguard patients, staff, and assets. Inner Ranges systems ensure patient safety by preventing unauthorized access to sensitive areas and protecting against potential threats. They also help maintain the integrity of medical equipment, medications, and confidential patient information, ultimately fostering a secure environment conducive to effective healthcare delivery.

- Cyber Secure
- Building Automation
- Duress Alarms
- Multiple Site Management
- Video Management
- Visitor & Site Management
- Elevator Management
- Biometric Credentials
- Highly Encrypted
- Number Plate Recognition
- Video Surveillance
- Mobile Credentials
- Intruder Detection
- Wireless Access Control
